

# Simon Apostolovski

Junior Front End Developer and a Bachelor in E-Business.

I am highly motivated, willing and able to learn new things, but also improve on what I already know and always staying optimistic.

Also, a competent and communicative team player, focused on using my creativity and skills on getting the job done alongside my teammates with correct time management and flexibility.

I focus on ReactJS paired up with SASS or Styled Components that I write on my own as I prefer it, however I'm experienced and can work with the Bootstrap library if needed or learn more about other libraries. I always try to implement something new and find different solutions to the same problems.
